## Q-Scan Counter and Local Base PC for a Single Entrance System Schematic

The illustration below shows a basic layout for a single Q-Scan counter and local base PC. The Q-Scan counter will be connected to the existing network via a POE Injector to supply power to the unit. The POE Injector will be connected to the network & located in the Comms Room or Comms Cabinet. The Recap Base Unit will be located on site within the comms room. Another PC on the network can be used to view the shared count data.

Additional (or spare) mains socket(s) will be required to power the equipment in the comms room(s) (or comms cabinets) and additional (or spare) network points will be required for connectivity.
